# 1 Overview

This documentation describes the connection of different displays to the F&S starter kits. With this informations, it will be easy to design an cable to connect your display with the F&S starter kit.

## 1.1 Display Interface

All F&S boards offer an very flexible and powerful interface to control displays (STN, CSTN, TFT). Many different displays can be connected directly to them without the need of any further hardware, only connector and cable are neccessary. Even the contrast voltage for STN/ CSTN displays is offerd from most of the F&S boards.

It is possible to adjust the starter kit to a new display by setting a few parameters, for example by downloading a small configuration text file (called display driver). On WindowsCE this is done by setting some keys in the registry. On Embedded Linux, this is done by setting environment variables in the boot monitor program. This is explained in separate documents.

From the view of the software (display driver), there are different possibilities.

Some display types are already predefined, so that a simple choice from a list is all that is required.

Many display drivers available, user can download from F&S hompage.

This configurable display drivers can be modified from the user also. This is explained in separate documents.

New display drivers can be requested from F&S, please send your display specification (pdf file) to [support@fs-net.de](mailto:support@fs-net.de)

**Important:**

Before any LCD display is connected to the starter kit, make sure that the board hardware is configured correctly (**please have a look in the hardware documentation of your board/starter kit**):

**NetDCU8:**

Display supply 3.3V R14  
Display supply 5V R13

TFT displays R16  
STN/CSTN displays R15

↳ See NetDCU8 hardware documentation.

**NetDCU10**

Display supply 3.3V JP2 (default)  
Display supply 5V JP1

The display type (TFT/STN/CSTN) is configured by software.

↳ See NetDCU10 hardware documentation.

**PicoMOD1**

The configuration is done by DIP switches S4 on the starter-kit board

Display supply 3.3V S4/1 off, S4/2 on  
Display supply 5V S4/1 on, S4/2 off

TFT displays S4/3 on, S4/4 off  
Color STN S4/3 off, S4/4 on  
Monochrome STN S4/3 on, S4/4 on

↳ See PicoMOD1 starter-kit hardware documentation.

## **PicoCOM2**

The configuration is done by:

Display supply 3.3V      JP4 (default)  
Display supply 5V      JP3

The display type (TFT/STN/CSTN) is configured by software.

↳ See also PicoCOM2 starter-kit hardware documentation

## 1.2 PicoMOD1 pin assignment list (TFT)

## 1.7 Display Adapters

F&S offers different display adapters to facilitate the connection of as many different displays as possible to the starter kits. For a lot of displays there are already tailor-made solutions available and the appropriate adapter is mentioned in the section for the specific display. For further information about the adapters themselves see the separate document “Display Adapters”. The available display adapters are listed on the F&S homepage (downloads).

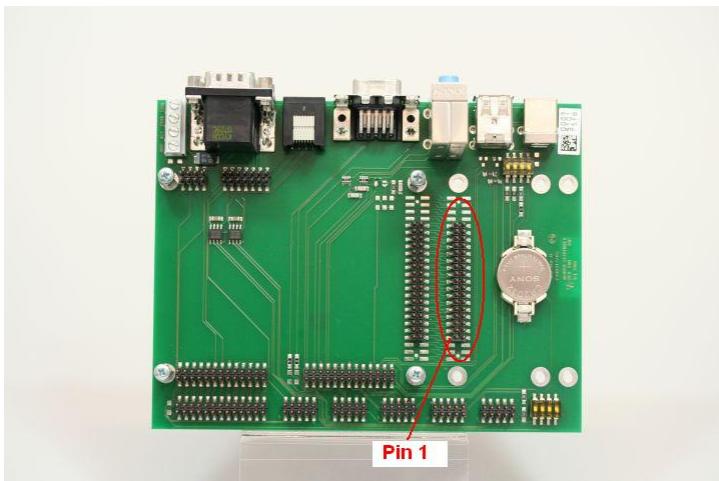

Display adapter (NetDCU-ADP/TX9) plugged into PicoCOM2-SKIT

## 1.8 Starter kits of F&S

F&S offer starter kits to all F&S boards.

Generally there is an 34 Pin connector available on the base-board of the starter kit. This 34 Pin connector offer the signals and power supply to drive an display.

Baseboard (NetDCU-Startinterf4) caming with most of the NetDCU and PicoMOD starter kits. Display connector J3A and Pin 1 are marked.

J3 Display Interface

### **3 Important Notice**

The information in this publication has been carefully checked and is believed to be entirely accurate at the time of publication. F&S Elektronik Systeme assumes no responsibility, however, for possible errors or omissions, or for any consequences resulting from the use of the information contained in this documentation.

F&S Elektronik Systeme reserves the right to make changes in its products or product specifications or product documentation with the intent to improve function or design at any time and without notice and is not required to update this documentation to reflect such changes.

F&S Elektronik Systeme makes no warranty or guarantee regarding the suitability of its products for any particular purpose, nor does F&S Elektronik Systeme assume any liability arising out of the documentation or use of any product and specifically disclaims any and all liability, including without limitation any consequential or incidental damages.

Products are not designed, intended, or authorized for use as components in systems intended for applications intended to support or sustain life, or for any other application in which the failure of the product from F&S Elektronik Systeme could create a situation where personal injury or death may occur. Should the Buyer purchase or use an F&S Elektronik Systeme product for any such unintended or unauthorized application, the Buyer shall indemnify and hold F&S Elektronik Systeme and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, expenses, and reasonable attorney fees arising out of, either directly or indirectly, any claim of personal injury or death that may be associated with such unintended or unauthorized use, even if such claim alleges that F&S Elektronik Systeme was negligent regarding the design or manufacture of said product.
